CITATIONS:

D1: US 6043642A (MARTIN et al), 28 March 2000

D2: EP 201253B1 (THORN EMI Patents Limited), 18 December 1991

NOVELTY and INVENTIVE STEP:

Claims 1-20 are novel and involve inventive step because no individual citation or obvious combination of citations teach or suggest "a power line communication system including a plurality intelligent devices in communication with a power line and operable to monitor energy usage at a site and communicate usage data onto the power line, and a controller also in communication with the power line, wherein each intelligent device maintains a routing table identifying a first set of other intelligent devices downstream of it relative to the controller that it can communicate with directly and identifying a second set of other intelligent devices downstream of it relative to the controller that it can communicate with through with through one or more of the first set of other intelligent devices".

INDUSTRIAL APPLICABILITY:

Claims 1-20 have industrial applicability because the claimed invention can be made or used in the field of power line communication and metering systems.
